Experience

- **Dynamic Solution Innovators (DSi)** — Dhaka, Bangladesh
  Junior Software Engineer — *July 2026 – Present*

Education

- **University of Dhaka** — Dhaka, Bangladesh
  B.Sc. in CSE; CGPA: 3.39/4 — *Jan 2022 - Jan 2026*

Skills Summary

- **Programming Languages**: Java, Python, C, C++, JavaScript, SQL, Perl
- **Scripting & Automation**: Advanced Bash Scripting, Advanced Perl Scripting
- **Frontend Development**: React.js, Next.js, HTML5, CSS3
- **Backend Development**: Spring Boot, FastAPI, Flask
- **Databases**: MySQL, PostgreSQL
- **DevOps & Deployment**: Docker, Docker Compose, Linux, VPS Deployment, DigitalOcean, CI/CD
- **Tools & Version Control**: Git, GitHub, LaTeX

Projects

1. **ToToCompany — Travel & Flight Booking Platform** *GitHub*
   Java, Spring Boot, Next.js, MySQL, Spring Security, JWT, OAuth 2.0, Docker
   A full-stack travel web application for exploring global landmarks, browsing flight information, and managing user profiles with secure authentication.

   - Developed REST APIs using Spring Boot and MySQL for backend services and user management.
   - Implemented landmark exploration with search and filtering, along with a flight search interface.
   - Integrated Google OAuth 2.0 authentication, JWT-based security, email OTP verification, and password recovery.
   - Applied Singleton, Factory, MVC, and Builder design patterns to improve code organization and maintainability.

2. **CSEDU Department Website** *GitHub*
   Python, FastAPI, Javascript, NextJS
   A collaborative project to develop the official website of the University of Dhaka's CSE department, featuring user management, academic resources, announcements, and event scheduling.

   - Designed and implemented REST APIs for meetings, events, and announcements modules.
   - Developed the meetings, events, and announcements pages and integrated them with the backend APIs.

3. **Marketplace Web Application** *GitHub*
   Python, Flask, Javascript, NextJS
   Flask-based backend system with REST APIs designed using a modular and scalable architecture for efficient data handling.

   - Designed and implemented RESTful APIs for core marketplace functionalities.
   - Structured the backend using a modular architecture to ensure scalability and maintainability.
   - Handled data processing and routing efficiently for seamless client-server communication.

4. **NetConnect — Terminal-Based Group Chat System** *GitHub*
   Python, Socket Programming
   Multi-user real-time chat application with group creation, member approval, and access control using a custom networking protocol.

   - Implemented real-time multi-user messaging using socket programming.
   - Designed group creation and approval-based access control mechanisms.
   - Developed a custom communication protocol for efficient and reliable data exchange.
